630087, Novosibirsk, Nemirovich-Danchenko str., 130*

All patients with diseases of the esophagus have varying degrees of nutritive deficiency, which increases the risk of postoperative complications. To improve the treatment results the nutritive therapy with standard or enteral giperkaloric mixture has been included in the preoperative preparation of the patients in accordance with the pathogenetic mechanisms underlying the development of nutritional deficiency.

Keywords: malnutrition, starvation, preoperative preparation, cicatrical narrowing of the esophagus, achalasia of the esophagus, nutrition support.

Berkasova I.V. — candidate of medical sciences, assistant of the chair of anesthesiology and critical care medicine of the faculty of professional skill upgrading of doctors, anesthesiologist-resuscitator department of anesthesiology and resuscitation, e-mail: ness-24@yandex.ru
